

E-type Circlips are made from spring stainless Steel. E-type Circlips are made to fit onto shafts that may or may not be precision manufactured, or you require a less expensive type of retainer. The E type circlip does not require a special pair of pliers to fit it. Used mainly for locating or retaining components from sideways movement. Circlip E Type Metric Stainless Steel Kit 300 Piece. The Eureka Assortments container is made of heavy durable plastic, each holding individual slots separating each product size independently.
